

Clinical Pharmacogenomics (PGx) Safety Report

Patient File:	patient_sample1.vcf
Proposed Medication:	Clopidogrel
Analysis Type:	Tri-Domain PGx & Organ Clearance Safety Check

Genomic & Guideline Findings

- **Gene Evaluated:** CYP2D6
- **Assessed Phenotype:** Poor Metabolizer
- **CPIC Recommendation:** No specific CPIC rule found for this variant.
- **FDA Note:** No specific FDA table entry found for this variant.

- **Gene Evaluated:** CYP2C19
- **Assessed Phenotype:** Poor Metabolizer
- **CPIC Recommendation:** Avoid Clopidogrel due to significantly reduced active metabolite formation. Switch to Prasugrel or Ticagrelor.
- **FDA Note:** FDA Boxed Warning: Diminished effectiveness in CYP2C19 poor metabolizers. Consider alternative treatment.

- **Gene Evaluated:** SLCO1B1
- **Assessed Phenotype:** Poor Metabolizer
- **CPIC Recommendation:** No specific CPIC rule found for this variant.
- **FDA Note:** No specific FDA table entry found for this variant.

Organ Clearance & Physiological Parameters

- **Kidney eGFR:** Normal (Value: 90 mL/min)
- **Liver ALT:** Normal (Value: 25 U/L)

Anatomical Warnings:

- Organ clearance parameters (Kidney & Liver) are within normal physiological ranges.

FINAL CLINICAL VERDICT: SAFE / NORMAL
